

Progress Report

Day 12 — Backend Milestone Review & Documentation

Task Management MERN Stack Platform

Shafin Nigamana | 30 May 2026

1. Day 12 Objective

The goal for Day 12 was to review the completed backend implementation, update project documentation, organize API testing resources, and finalize the Week 2 backend milestone.

2. Tasks Completed

Backend Verification

- Reviewed all implemented backend modules
- Verified:
 - Authentication APIs
 - Team Management APIs
 - Task Management APIs
 - Audit History API
- Confirmed all endpoints function correctly without additional changes

Figure 2.1 — Backend modules verified successfully.

README Documentation Update

- Updated project README with current backend implementation details
- Documented:
 - Technology stack
 - System architecture
 - Implemented features
 - API modules

- Current project status

Figure 2.2 — Updated project documentation inside README.

Postman Collection Organization

- Reviewed and organized API testing collection
- Structured requests into:
 - System
 - Auth
 - Teams
 - Tasks
 - Audit

Figure 2.3 — Organized Postman collection for backend testing.

Repository Update

- Reviewed GitHub repository and project progress after completion of Week 2 backend milestone
- Verified:
 - latest backend features pushed successfully
 - README documentation updated
 - milestone branches maintained through Git workflow
 - repository reflects current implementation status

Repository: <https://github.com/ShafinNigamana/task-management-mern>

Figure 2.4 — GitHub repository updated with completed Week 2 backend milestone.

Branch Merge & Milestone Closure

- Merged Week 2 development branch into main branch
- Updated repository with completed backend milestone implementation

```

shafi@Shafin-PC MINGW64 /d/MyProject/task-management-mern (main)
$ git pull origin main
create mode 100644 server/src/controllers/teamController.js
create mode 100644 server/src/middleware/auth.js
create mode 100644 server/src/models/Team.js
create mode 100644 server/src/models/User.js
create mode 100644 server/src/routes/auth.js
create mode 100644 server/src/routes/healthRoutes.js
create mode 100644 server/src/routes/teamRoutes.js
create mode 100644 server/src/server.js

shafi@Shafin-PC MINGW64 /d/MyProject/task-management-mern (main)
$ git merge feature/task-module
Merge made by the 'ort' strategy.

3. Next Steps

- Begin frontend planning phase
- Prepare:
 - React routing
 - Authentication pages
 - Dashboard layout

- API integration with backend

4. Conclusion

Day 12 focused on backend review, documentation updates, repository organization, and milestone completion. All planned backend features for Week 2 were completed successfully and merged into the main project branch.
